

GDC is a total solutions provider for a wide variety of products and components to a range of industries. From modest beginnings in 1955 producing parts for the automotive industry, we have expanded and developed an impressive set of modern engineering, manufacturing and supply management capabilities.

As a strong, well capitalized and stable company, GDC, Inc. currently supplies over 20 million parts annually to companies like Ford, Toyota, GM, Chrysler and more. Our excellent reputation for integrity and a long track record of steady growth has continued even during times of uncertain economic and industry conditions.

GDC, Inc., strategically located in the heart of the United States manufacturing belt, supplies products to corporations around the world.

World Class Engineering and Development

Our engineers blend creative solutions with relentless attention to detail.

Because of our well-earned reputation to "out engineer" anyone in the industry, our customers frequently present us with their most difficult challenges. From function and performance testing to efficient material utilization, OEM specification research and OEM approval, GDC's engineering expertise is second to none.

Beyond product development, we often engineer the very raw materials themselves to achieve the desired goals.

A Total Solutions Provider

From securing raw materials and logistics to end user integration and everything in between, GDC, Inc. is truly a total solutions provider. Within our organization, we've achieved a level of vertical integration that enables tight coordination and ensures product integrity.

Our full in-house lab enables fast development of custom compounds.

Efficient Eco-friendly Production

Our innovative approach extends far beyond the products we develop to our production processes themselves. On average, we're able to recycle from 80% to as much as 99% of production waste, reducing production cost and environmental waste. What's more, our Midwestern location offers convenient shipping, below-average energy costs and access to a low-cost, yet highly skilled labor force.

Additionally, we have developed an extensive network of partnering suppliers to compliment our capabilities and meet nearly any need imaginable.

Markets Served

- Automotive
- Heavy Truck
- Agriculture
- Commercial Construction
- Industrial
- Specialty Vehicle

Capabilities and Processes

- Raw Material Engineering
- Product Engineering
- Flat and Rotary Die Cutting
- Slitting and Lamination
- Compression Molding
- Injection Molding
- Profile Extrusion
- Sheet Extrusion
- Assembly
- Thermoforming

Certifications

- ISO-9001
- ISO-14001
- Ford Q1
- TS 16949
- Tier 1 and Tier 2 Supplier
- Woman Business Enterprise
